

BRUNSWICK

First Impressions Matter

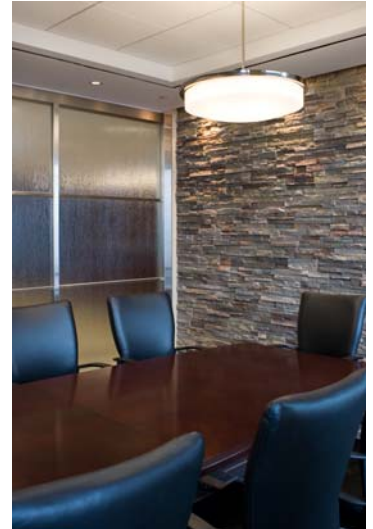

Green Office Furniture Choices

Brunswick partners with organizations to create socially responsible, and environmentally sustainable office spaces.

Consumer demand for Green has created new choices for building furniture that has less environmental impact. As a result there are more options than ever for using sustainable materials and better processes for building, finishing and transporting furniture.

From new finishes that are water- instead of solvent-based, to particleboard that doesn't use formaldehyde, to sustainable forestry and wood harvesting practices, Brunswick embraces change.

Brunswick helps organizations explore the options and create furniture that truly represents their values.

A starting place for greener offices...

Nu Green Particleboard

Brunswick uses Nu Green -- an EPP certified product that contains 100% post industrial wood fiber, which saves trees and avoids landfill. Nu Green is manufactured with a process whereby no urea formaldehyde is added. The resulting emissions are no greater than levels occurring in outdoor ambient air conditions.

Efficient Facilities & Practices

Brunswick's modern facilities use less raw material and produce less waste.

New HVLP Spray Finishing Systems

Brunswick's new HVLP high volume spray finishing systems minimize emissions into the atmosphere.

Low VOC Lacquer or Water-based Lacquer

Brunswick uses the latest generation low VOC lacquers. For many types of furniture water-based lacquers are also available (Brunswick is continually testing and researching how to improve green finishes).

Built to Last

Brunswick's furniture is most definitely not disposable. It lasts and lasts and as a result is easier on the pocketbook and the environment.

Built in North America

Buying close to home is better for the environment.

Sustainably Harvested Wood Products

Brunswick doesn't use endangered woods. Our hardwood materials come from Canada and the United States where sustainable forest management practices are in place. Whenever possible we purchase FSC rated veneers.

Responsible Waste Management

All Brunswick finishing waste is sent to waste management centres for processing.
